

NEW RANGE OF ELCIS MAGNETIC ENCODERS

Further to its wide range of encoders and linear transducers, **ELCIS** presents now a new series of **magnetic encoders**.

These new transducers fit for applications that are not compatible with the traditional optical models because of size, high rotation speed and IP degree and they are a versatile and economic measurement system with high reliability.

This new range includes several models with \varnothing 22÷36 mm and they are available either with ball-bearings or in no contact version and upon request it is possible to reach up to IP68.

The output of the incremental types can be line-driver, push-pull, NPN or sinusoidal, according to the chosen model.

The output of the absolute models can be parallel, SSI or analogic, according to the chosen model.

By means of those new products **ELCIS** updates its long lasting undertaking in order to grant the best flexibility and to offer new solutions and ideas to its range, always according to **UNI EN ISO 9001:2000** standards.

For any further information do not hesitate to request our CD-ROM catalogue or visit our web site www.elcis.com where you can find a technical file for each **ELCIS** product.

Our technical department is always at your disposal.
